40

Pred. No. is the number of results predicted by chance to have a

> Seg. 108 10/020338

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The ZmMAD3 protein is essential for flower development and is active in flowers, in particular, in immature flowers and female flowers, but also in the mature embryo sac of maize. The ZmMAD3 protein is also active in nodes and adjacent cell layers. ZmMAD3 polynucleotides and polypeptides are useful influencing flower structure, function and seed or fruit development in transgenic plants.

C conversion of shoot meristem to floral meristem. The clone was conversion of shoot meristem to floral meristem. The clone was conversion of shoot meristem to floral meristem. The clone was conversion as Zea mays ear cDNA library using Arabidopsis API C cDNA (see AAT76885) as probe. Sequence homology indicates that C cDNA (see AAT76885) as probe. Sequence homology indicates that converted to floral meristem to a few basal to flowers by inflorescence shoots that are not subtended by flowers. When API is ecotopically expressed in shoot meristem, the shoot meristem is converted to floral meristem and early flowering can occur. The invention relates to floral meristem identity genes API, LFY and especially CAI (see AAT76885-97 and AT99437) and their use in converting shoot meristem to floral meristem and in promoting early flowering in transgenic plants, especially angiosperms such as cereal plants, leguminous plants, oilseed plants, trees, fruit-bearing plants and ornamental flowers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-NOV-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAV58307;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAV58307 standard; DNA; 1345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence encodes the Zea mays AP1 protein (ZAP1). This sequence was used to isolate DNA encoding the Arabidopsis thaliana CAULIFLOWER (CAL) protein of the invention. An expression vector containing the CAL DNA sequence can be used to convert shoot meristems to floral meristems.

                                                                                                                                                                       The present sequence encodes a floral meristem identity gene product, CC APETALAI (API), from Zea mays. The invention relates to a non-naturally occurring seed plant comprising a first ectopically expressible nucleic acid encoding a first floral meristem identity gene product, provided that the first nucleic acid is not ectopically expressed due to a mutation in an endogenous TERMINAL FLOWER gene. The invention describes of converting shoot meristem to floral meristem, especially in order to promote early reproductive development, in an angiosperm, which comprises introducing a first ectopically expressible nucleic acid molecule encoding a first floral meristem identity gene product into the angiosperm. Ectopic expression of the floral meristem gene product in the shoot meristem tissue of the transgenic plant, allows selection of the time of seed development in the plant which can be useful for manipulating the time of crop harvest in seed-derived crops such as grapes, beans, corn, wheat, rice, hop, etc., or to hasten the breeding of e.g. tree species, for insect or disease resistance.

This sequence comprises maize APETALA (ZAP1) cDNA, which encodes a floral meristem identity gene product (see AAW39134) that is involved in the conversion of shoot meristem to floral meristem. It was isolated from an immature ear cDNA library using Arabidopsis AP1 cDNA (see AAV02760) as probe, and is suggested the maize orthologue of AP1. Mutation of the AP1 gene results in replacement of basal flowers by inflorescence shoots that are no

The invention relates to an expression vector comprising a nucleic acid sequence encoding a floral meristem gene product operably linked to a heterologous regulatory element (see AAV02770-75). The floral meristem gene product is selected from AP1, LFY (LEAFY) and CAL (CAULIFLOWER) (see AAV02760-67). The expression vector is used to convert shoot meristem tissue to floral meristem tissue in transgenic plants, especially angiosperms or gymnosperms, thereby promoting early reproductive development in these plants. This can be used to manipulate the time of crop harvest and to hasten breeding time.

This sequence comprises maize ZAP1 cDNA, which encodes a floral meristem identity gene product (see AAW43329) that is involved in the conversion of shoot meristem to floral meristem. It was isolated from an immature ear cDNA library using Arabidopsis AP1 cDNA (see AAV06018) as probe, and is suggested to be the maize orthologue of AP1. Mutation of the AP1 gene results in replacement of basal flowers by inflorescence shoots that are not subtended by flowers. The invention relates to a recombinant nucleic acid molecule that comprises an inducible regulatory element (see AAV06018-24) operably linked to a nucleic acid molecule (see AAV06018-24) encoding a floral meristem identity gene product (see AAV06018-24) encoding a floral meristem (CAL) or LEAFY (LFY). The nucleic acids are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Use of floral meristem identity genes to convert shoot meristem floral meristem - for promoting early reproductive development i the plants and control timing of seed-derived crop harvest(s) in

The AP1 polypeptide is an ectopically expressible floral meristem identity gene product. The specification also describes CAULIFLOWER (CAL) and LEAFY (LFY) gene products. CAL is involved in the conversion of shoot meristem to floral meristem. CAL is highly conserved among different angiosperms. The CAL polynucleotides may be used to shoot meristem to floral meristem, and to promote early flowering in angiosperms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a Brassica having a cauliflower phenotype involves detecting a polymorphism associated with cauliflower locus comprising modified cauliflower allele that does not encode active cauliflower
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI; 2000-618379/59.

                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a new non-naturally occurring seed plant that comprises a first ectopically expressible nucleic acid molecule encoding a floral meristem identity gene product, provided that the seed plant does not contain a mutation in an endogenous TERMINAL FLOWER (TFL) gene that results in ectopic expression of CAL. The non-naturally occurring seed plant exhibits early reproductive development. The method of promoting early reproductive development can make breeding of long generation seed plants such as trees practical. The method can be used to increase floral meristem identity gene product expression in different crop fields at different times, resulting in a staggered time of harvest for the different fields. The present sequence represents a Zea mays
                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New transgenic seed plant exhibiting early reproductive comprises a CAULIFLOWER encoding nucleic acid and a non-endogenous TERMINAL FLOWER gene -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the APETALA1 (AP1) gene sequence from corn. AP1 is a floral meristem identity product, that promotes conversion of shoot meristem to floral meristem in an angiosperm. Vectors containing the AP1 gene can be used to create transgenic plants. AP1 nucleotide sequences can be used to promote early reproductive development in seed plants can be used to promote early reproductive development in seed plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAZ92144 standard;

                                                                                                                         cDNA clones SQE1 (AAT34429), SQE2S (AAT34430) and SQE2L (AAT34431) identified by homology to the MADS box of the Arabidopsis apetala 1 (AP1) and Antirrhinum squamosa (SQUA) flower development genes. They were obtd. by PCR amplification of E. globulus DNA using primers based on the MADS box of the Arabidopsis and Antirrhinum genes, followed by screening of a E. globulus young flower bud library. The SQE2S cDNA codes for protein SQE2-S (AAR99635). Antisense or ribozyme constructs of SQE, or of FLE2 and SQE genes (see also AAT34426, AAT34428 and AAT34432), may be used to produce sterile transgenic Eucalyptus trees by minimising inflorescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eucalyptus; reproductive gene; SQE2S; Arabidopsis; agomous gene; Antirrhinum; plena gene; sterility; fertility; forest tree; transgenic plant; flower development; antisense; ribozyme; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAT34430;

                                                                                                                                                                                                                                                                                                                                                                                      Zea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              They were obtd. by PCR amplification of E. globulus DNA using primers based on the MADS box of the Arabidopsis and Antirrhinum genes, followed by screening of E. globulus young flower bud library. The SQEZL cDNA codes for protein SQEZ-L (AAR9936).

Antisense or ribozyme constructs of SQE, or of FLEZ and SQE genes (see also AAT34426, AAT34428 and AAT34432), may be used to produce sterile transgenic Eucalyptus trees by minimising inflorescence.
                                                                                                                                                                                                                                                                                                        06-SEP-2000.
